# TouchMonitor TM3 Smart

**Flexible touch screen layout • Loudness: EBU, ITU, ATSC, ARIB, OP-59, AGCOM, CALM • LRA • PPM/True Peak SPL • Stereo/6-channel operation • Dialnorm • Audio: Analog, S/PDIF, AES3 • Moving Coil • Timecode • Chart**

TouchMonitor TM3 Smart (TM3S) is an exceptionally budget-friendly metering solution for applications including editorial working environments, edit suites and smaller control rooms, to name but a few. It consists of a display unit with 4.3" touch screen that can be used either vertically or horizontally and a separate interface box.

TM3S features PPM and true peak measurements as well as comprehensive loudness measurement functions such as single-channel and summing bargraphs, loudness range, loudness chart, and numerical displays that conform to all relevant global standards (EBU R128, ITU BS.1770-4/1771-1, ATSC A/85, ARIB, OP-59, AGCOM, and CALM).

The straightforward user interface allows for quick and simple preset selection. Presets can be configured in detail using the Devicer DC1 software for Mac OS X® or Windows®. The Devicer's GUI lets you select, configure and position the instruments you need in a convenient way. The screen layout can be previewed at any time to see how your preset will look like on the TM3 Smart.

The TM3 Smart works with analog or digital stereo signals and processes six digital input channels in parallel. Stereo signals can also be displayed on needle instruments (Moving Coil).

Stereo Correlator for displaying the phase relationship between the two channels of a stereo signal and thus its mono compatibility. Additional control keys for positioning on the display.

## Smart Software Package (continued)

The Timecode Reader instrument is used to decode and to display an LTC timecode of an external analog or digital source for the use with Loudness applications.

AES Status monitor for displaying various parameters of AES3 digital audio signals in plain text. Additional control keys for positioning on the display.

Global Keyboard with definable on-screen keys for simultaneous control of defined functions in multiple instruments, and for preset recall. It also allows external control via GP IO interface.

Upcoming instruments and functions can be added via firmware update, which will be available from the download area of our website (<https://www.rtw.com/en/support/manuals-software-downloads.html>). Read the **Specifications** section to learn more about the listed instruments.

## Devicer DC1

By default, the TM3S's preset memories contain comprehensive sets of factory presets covering many common applications. The Devicer DC1 used to personalize the presets is available free of charge from the download area of the RTW web site (<https://www.rtw.com/en/support/manuals-software-downloads.html>). The Devicer's GUI lets you select, configure and position the instruments you need in a convenient way. The screen layout can be previewed at any time to see how your preset will look like on the TM3 Smart (TM3S). After having installed this Device Configurator software on your Mac OS X® (10.6. to 10.9.) or Windows® (7/8) computer, the TM3S is connected to it using a USB cable (Mini-B / A). After all edits are performed and saved in the Devicer DC1, the respective presets can be uploaded to the TM3S.
